

AdvCheckBox

Overview

AdvCheckBox is a SwiftUI view designed to provide an advanced checkbox component with customizable features such as label, help text, display mode, and focus handling. It is available on macOS 14.0 and iOS 17.0 onwards.

Example Code

```
public init(isChecked: Binding<Bool>,
           label: String = "",
           help: String = "",
           labelPosition: LabelPosition = .horizontalLeading(),
           displayOnly: Bool = false,
           hasFocus: Bool = false,
           isRequired: Bool = false)
```

Parameters:

- isChecked: The binding for the checkbox's checked state.
- label: The label associated with the checkbox.
- help: The help text associated with the checkbox.
- labelPosition: The position of the label relative to the checkbox.
- displayOnly: A flag indicating whether the checkbox is for display only.
- hasFocus: A flag indicating whether the checkbox has the initial focus.
- isRequired: A flag indicating whether the checkbox is required.

Example Usage

```
AdvCheckBox(isChecked: $isChecked,
           label: "Accept Terms and Conditions",
           help: "Read and accept the terms before proceeding.")
```
