AdvMapView

Overview

AdvMapView is a SwiftUI view that provides an advanced map view with customizable features such as camera position, map markers, and marker selection. It is available on macOS 14.0 and iOS 17.0 onwards.

Example Code

```
public init(position: Binding<MapCameraPosition>,
            markers: Binding<[MapMarkerItem]>,
            selection: Binding<MapMarkerItem?> = .constant(nil))
```

Parameters:

- position: A binding to the camera position of the map.
- markers: A binding to the array of map markers to display.
- selection: A binding to the selected map marker. Default is nil.

Example Usage

```
AdvMapView(position: $cameraPosition,
           markers: $mapMarkers,
           selection: $selectedMarker)
```
