

AdvDivider

Overview

The AdvDivider is a SwiftUI view that provides an advanced divider with customizable properties such as color, width, direction, and padding. It allows for flexible styling and placement within your user interface.

Example Code

```
public init(  
    color: Color? = nil,  
    width: CGFloat = 2,  
    direction: Axis.Set = .vertical,  
    padding: CGFloat = 5  
)
```

Parameters:

- `color`: The color of the divider. Default is nil, resulting in a default gray color with 15% opacity.
- `width`: The width of the divider. Default is 2.
- `direction`: The direction of the divider. Default is `.vertical`.
- `padding`: The padding around the divider. Default is 5.

Example Usage

```
AdvDivider(  
    color: .blue,  
    width: 3,  
    direction: .horizontal,  
    padding: 8  
)
```
